

SKILLS

Tools and Languages Python, Git, PyTorch, TF & Keras, OpenCV, Cuda, MLflow, Docker, MongoDB, C & C++, Matlab

(at least intermediate)

Research Interest & Areas Medical Image Processing & Segmentation, Scene generation in motion pictures, Mathematical Modeling and Visualization with Manim

Communication Turkish, English

PUBLISHED

Papers & Studies

- An ensemble deep learning approach to detect tumors on Mohs micrographic surgery slides. [↗](#)
- Cross-Lingual Phonetic Distance Learning via Transliteration Pairs, presented at IEEE SIU 2025 Conference, paper [↗](#)

TECHNICAL EXPERIENCE

Research Engineer

02/25 - Present/

Huawei

- Conference Paper: Measuring phonetic distance between cross-lingual character pairs, at IEEE SIU 2025 Conference. [↗](#)
- 1% improvement to accuracy in ranking pipeline via the addition of phonetic feature, 2% improvement to translation accuracy on Cyrillic and Arabic queries.
- AB Test Planning, Creation and Tracking: Tracked 120+ AB tests on 7 major regions over 8 sprints.
- Extract query-app embeddings, build & train two-tower type models to improve recall and recommendation quality.
- Develop velocity-based features with periodical query-app data to improve the ranking model, helping the cold start problem.
- Developed Query Prefix Match algorithm resulted in 6.1% DTR increase in Russia (+10k volume/day).
- Also worked on Query Augmentation, Correction and Shortname Match algorithms to improve recall. Overall DTR and Revenue change 1.7% and 8.6% respectively.
-

AI Researcher & Engineer

10/23 - 10/24

Mogram

- Mass & Tumour & Calcification segmentation with various encoder-decoder networks.
- Used patch-based transformer encoder-decoder network to enhance f1 and box f1 scores by around 10%.
- R&D of the segmentation training pipeline with MLflow.
- Combined SLIC algorithm with adaptive thresholding to gain roughly 10x speed over CPU-bound processes.
- Design of on-premise service authentication and encryption routines.
- Anonymization of the DICOM file structure and organization of datasets.
- Resolved Docker and MongoDB issues in a remote setup.

AI Team Member & Participant & Lecturer

~ 02/21 - Present

Inzva

- Design and tracking of learning materials as a member of the AI Team.
- Gave lectures on Structures of ML projects and Computer Vision Fundamentals.
- Google Tensorflow Developer & DL Specialization certificates.
- Worked with Mamba architecture on State Space Tracking/Modelling of Transformer-based LLMs.
- Application of various deep learning models and study programs to solve real-life and designed challenges for peer learning.

AI Research Student

06/22 - 10/23

ASIL Laboratories

- Dataset creation, labelling & preprocessing of medical histopathology images.
- Segmentation for pixel-wise tumour detection, f1 over 70% with unified resampling for post-processing.
- Image augmentation techniques with Autoencoder and Diffusion models
- Published abstract on arxiv. [↗](#)

Machine Learning Intern

07/22 - 08/22

Optiwisdom

- Integration of the customer database into NoSql.
- Various ML methods (boosting & tree algorithms) for revenue prediction.

EDUCATION

MSc Computer Sciences, Istanbul Technical University, GPA: .. / 4.00
Mechatronics Engineering Grad, Yıldız Technical University, GPA: 3.04 / 4.00

07/25 - Present
09/19 - 12/24

INTERESTS & STUDIES

Self study projects

- Basic chess game and a user interface using Python. [↗](#)
- Worked on creating a chess bot using alpha-beta pruning.
- Visualizing signals using Laplace Transformation with manim library on Python.
- Training of UNet/SwinUnetR architecture on the Skin Lesion Segmentation dataset.

Other Study

- Worked on 3D car localization with sensor fusion and YOLO [↗](#)
- Building an autonomous microscope to classify fungi cells for the graduation project. [↗](#)
- Deep Learning Specialization courses and certificate by Andrew Ng. [↗](#)
- Tensorflow Developer courses and certificate by Laurence Moroney. [↗](#)
